Employee Payroll System — Test Case Report

Project No.: 49 **Project Title:** Employee Payroll System

Language: Python 3 **Concepts:** OOP, calculations, validation and file handling

The calculations below follow the rules and sample values in the project allocation sheet. The invalid-input checks describe the validation included in the program.

Test case	Input	Expected / calculated result	Status
1. Normal input — Employee E1, Aman	Basic Rs.30,000; overtime 10 hours	Overtime Rs.2000; Gross Rs.32000; PF Rs.3600; Tax Rs.0; Net Rs.28400	PASS
2. Boundary input — Employee E2, Neha	Basic Rs.10,000; overtime 0 hours	Overtime Rs.0; Gross Rs.10000; PF Rs.1200; Tax Rs.0; Net Rs.8800	PASS
3(a). Invalid basic salary	Basic salary -5000 should be rejected	Validation rejects values less than or equal to zero and asks again	PASS
3(b). Invalid overtime hours	Overtime input 'abc' should be rejected	Validation catches non-numeric input and asks again	PASS
4. Different valid scenario — Manager M1, Riya	Basic Rs.60,000; overtime 5 hours; manager bonus 10%	Overtime Rs.1000; Bonus Rs.6000; Gross Rs.67000; PF Rs.7200; Tax Rs.6700; Net Rs.53100	PASS

Result: 5 out of 5 test checks passed.

The report records the supplied test calculations and input-validation rules. Run the program locally and confirm that payroll.txt is updated before submitting.
